EMPLOYMENT OPPORTUNITIES IN BIOINFORMATICS

Manisha Mathur

Bioinformatics is the application of "information technology to the field of molecular biology." It is an interdisciplinary field, developing methods and software tools for analysing biological data. The term Bioinformatics was coined by Pauline Hogeweg and Ben Hesper in 1970 for the study of information processes in biotic systems. Bioinformatics is an applied science that specializes in the analysis of large quantity of biological data, particularly in the area of genomics, proteomics and molecular biology by employing computational tools. Bioinformatics is a dynamic and fast growing interdisciplinary science present in the intersection of biology, mathematics, statistics and computer sciences.

The field of Bioinformatics is one way to deal with this

explosion of data. Bioinformatics is: "a mixture of the mundane and the sublime." The mundane includes data integration, data formatting and conversion (also known as parsing), and automation- "doing a relatively straightforward analysis a million times for few days and then dealing with the volume of results

got and turning them into something useful. It's when the useful parts start to emerge that the sublime aspects surface. Some of the most exciting stuff is working with large bodies of sequence and gene-expression the detects of patterns that come out and how they reproduce biology.

Role of Bioinformatics in R&D Sector

'Innovations in Bioinformatics' generate new Business Insights to employ the Bioinformatics tools to manage high-throughput data from omics technologies, systems biology modeling and biomarker discovery. Knowledge management solutions required are reviewed to identify the latest developments in Bioinformatics, assess the tools and platforms that can improve drug development and benchmark effective implementation of strategies. R&D laboratories are coordinating the analysis of increasing volumes of disparate biological data, largely comprised of gene and protein sequences. Bioinformatics has enabled data management for companies to improve their productivity within their R&D programs by identifying new drug target, diagnostic biomarkers and biomarkers of drug efficacy

and toxicity. From a systems biology approach, Bioinformatics combine data into interactive models to highlight disease pathways and aid the discovery of on off-target effects of compounds. Knowledge management solutions are crucial in both instances, enabling project teams to make informed decisions about potential new drugs.

Traditional drug discovery technologies are reaching the limits of their ability to yield innovative new drugs. Consequently, pharmaceutical firms and researchers are increasingly turning to Bioinformatics technologies, which use genetic information for their functioning.

This study pinpoints opportunities and highlights potential challenges, allowing the companies to develop the most effective business plan. The

NEW AND INNOVATIVE AGRICULTURE CAREERS FOR THE NEW-GEN OUTLIERS

Rruchi Shrimalli

We think farming is a profession for the poor and the uneducated. Stories of farmer's conditions and suicides reinforce this myth. But people are now realizing that agriculture can be much more in the hands of those who are well-educated, well-trained and have their hearts in the right place.

Here are some glorious examples:

- Satyajit and Ajinka Hange have been hitting headlines for having a turnover of Rs 3 crore per annum through organic farming. The brothers studied in an Anglo-Indian boarding school in Pune while their father toiled in the fields in the Bhodani village in Indapur taluka of Maharashtra. Satyajit and Ajinka graduated with an MBA degree from Pune University and worked in the top MNC banks like Citibank,

HDFC, HSBC and DBS for nearly a decade before moving over to organic farming.

Their success did not come easily. While they wanted to popularise the environment friendly and healthier organic farming model, they had to find ways to fetch a better price for their crops. They set up a new farmer market and got rid of the middlemen and retail chains by taking their produce to the

customer's doorstep. Today, their customer base includes several Bollywood celebrities and some of the biggest business tycoons.

- Pratibha Krishnaiah is another example of someone who gave up a cushy job of a software engineer in an MNC in Bengaluru to do farming in a village in Uttarakhand. Her motive was to help rural women earn money without having to leave their families

and move to distant towns. Pratibha also teaches skills like knitting and crochet work to women and plans to find markets for their products in cities to help them earn a steady income.

- Arvind Beniwal has established a 20-acre strawberry farm in the village of Palla at the northern fringes of Delhi. Many youngsters in this village have given up farming to grow exotic vegetables and fruits, wheat, paddy and even aromatic and medicinal plants.

- Noida-based lawyer Aparna Rajagopal established a 20-acre Beejom Organic Farm and Animal Sanctuary on the outskirts of the city. Along with her team of farmers from seven states, she grows several organic crops using rainwater harvesting and

techniques of natural farming and permaculture. Many of these crops are of native or heirloom varieties. Beejom is trying to change the mindsets and revive the organic way of living we once cherished.

Agriculture is one profession where you can earn money as well as make an impact on the people in rural India who have existed on the extreme fringes of our society till now - unseen, unheard, uneducated and unable to break free of their impoverished lifestyles. But agriculture is not only about farming. There are various aspects to this field.

Different facets of Agriculture you can work for

Production Agriculture

As the name suggests, this field involves producing crops, fruits & vegetables as well as raising poultry & livestock. Opening up a dairy, raising goats, sheep, pigs and even horses - all fall under the scope of production agriculture.

Agricultural Sales & Service

Selling fertilizers, pesticides, agricultural equipment and crops fall under the 'sales' category. Agriculture-related services include a wide range of jobs such as dusting crops, shearing sheep, trimming hoofs (of the livestock), farriers (smiths who fit horseshoes) and even veterinarians.

Agricultural Marketing & Business Management

Study of Business Economics, successful marketing tactics and a good understanding of developing markets can help anyone set up different types of businesses related to agriculture and agricultural products.

Agricultural Mechanics

This one includes agriculture engineering, maintenance of machinery, welding work, electrical work & plumbing, as well as planning and constructing buildings to produce and store agricultural products.

Agricultural Processing

Food Science is closely related to agricultural science. It means that agriculture graduates can work in any kind of food industry. At lower levels, the food industry requires plant workers, butchers, egg processors and many other skilled and unskilled kind of labour.

Forestry

Producing and harvesting timber, forest management and re-forestation are some of the career options you will love if you dream of living in green surroundings - away from the usual crowds.

Horticulture

Jobs related to cultivating and managing gardens fall under the aegis of horticulture careers. It includes greenhouse and nursery management, turf management, floriculture and landscaping (of gardens and expansive green spaces)

Rural Recreation & Natural Resources

This field mostly involves working with sustainable and renewable resources. Careers related to wildlife, water and soil can all fall under this category.

Agriculture Careers for those who want to do 'something different'

Agri-tech Entrepreneur:

Nowadays, a number of agri-tech startups are coming up with innovative, creative and environment-friendly solutions to produce a healthy and sustainable food supply and reverse some of the environmental damage has already been done. For example:

- ◆ **Agrostar**, founded in 2013 in Pune, is an m-commerce firm that sells agricultural products and solutions directly to farmers. It has its own field teams that deliver packages to more than 25,000 villages of Gujarat, Maharashtra and Rajasthan on a timely basis.

- ◆ Bengaluru-based **Ninjacart** connects over 3,000 farmers in South India with about 4,000 retailers in Chennai, Bengaluru and Hyderabad to transport fresh produce from farm to retailers in less than 12 hours!

- ◆ **Bombay Hemp Company**, founded in 2013, is exploring the medical uses of cannabis. It has partnered with the Council of Scientific and Industrial Research (CSIR) for the purpose. It is also working on making help clothes and conduct R&D on medicines related to the treatment of epilepsy and breast cancer.

- ◆ **Stellapps** employs the Internet of Things (IoT) concept and data analytics in the dairy space. Incubated in IIT Madras, it monitors the quality and quantity of milk, creates wearable devices to monitor the cattle health and looks after infrastructure to house cattle and store dairy products.

High-tech Farmer: When you use the latest technology and agricultural methods to save time, money and energy, you become one of the farmers who is re-shaping the agricultural industry in India. Some of the techniques high-tech farmers employ are - aeroponics (growing plants in the air), hydroponics (growing plants in water), using drones to survey their crops and satellites to drive tractors. Here are some examples:

- ◆ CropIn Technology Solutions introduced a cloud-based 'SmartFarm' platform which can remotely detect crop damage.

- ◆ Trimble Inc developed 'Greenseeker' - a hand-held device which can read soil nutrient levels instantly.

- ◆ Robert Bosch Engineering and Business Solutions offers an IoT-based system to schedule irrigation timings.

- ◆ Farmers can get the samples

of their soil tested in the labs across the country and get recommend-ation on what crops to sow and what fertilisers to use to get higher yields at a lower cost.

Agricultural Adventurer:

When you aren't interested in the typical 9-5 job you become an adventurer. Almost all the people we had first mentioned in the introduction of this article are adventurers in their own right. Agriculture is one field that will always be there and innovative technologies will keep creating new careers and new opportunities in the field. You can always contribute to this change by doing something that you really enjoy.

Agricultural Journalist: As a journalist, you can write about government schemes, industry regulations, food production options, new agricultural technologies and equipment and anything related to the latest happenings in the industry. Some of the best-known agricultural journalists in India covered the stories on the impact of the Forests Rights Act on the tribal people and worked on the impact of the rural health schemes on the BPL families of the Mewat region of Haryana.

Print and Packaging Designer:

Print and packaging designers are in high demand with grocery stores and retailers. So, if you are creative, you can design the packaging for the agricultural producers and food industrialists.

Agriculture Courses in India you can do after Class 12

Certificate Programs

The shortest agricultural courses that one can opt for after Class 10 or Class 12 are the Certificate programs that usually have a duration of one to two years. Most popular certificate programs are offered in Horticulture, Floriculture, Aquaculture, Fish Farming, Bee Keeping and Fruit Production.

Diploma Courses

Most diploma courses are three-years long but some of them may have a duration ranging from one to three years. One can do these courses after Class 10 or Class 12 (depending on the eligibility criteria defined by the institute offering the course). Most popular Diploma courses that people opt for are offered in the fields of Agriculture, Dairy Technology, Floriculture, Food Processing, and Horticulture.

Bachelor Programs

Students from any stream who have completed their Class 12 with the minimum specified criteria can opt for the BBA (Bachelor of Business Administration) in Agricultural Management. The duration of the course is three years.

Students who have cleared their Class 12 with Science stream (especially Physics, Chemistry, Biology (PCB) stream or PCB with Math (PCMB) stream)) can opt for B.Sc (Bachelor of Science) in Agriculture, Dairy Science, Plant Science, Agricultural Biotechnology, Agriculture and Food Science, Horticulture, Plant Pathology, Fisheries Science or Forestry. B.Sc programs are again 3 years long.

Students who have cleared their Class 12 with Science stream (especially Physics, Chemistry, Math (PCM) stream) can opt for B.E. or B.Tech courses in Agricultural Engineering, Agricultural Information Technology, Dairy Technology, Agriculture and Dairy Technology or Agriculture and Food Processing. Occasionally, students having PCMB or PCB stream may also be granted admission to these programs based on their academic records and performance in entrance exams. B.E. and B.Tech programs are typically 4 years long.

Where to study Agriculture?

About 400 educational institutions in India offer undergraduate and postgraduate courses in Agriculture (and related fields). Some of the best institutes to study Agriculture in India are:

1. Indian Agricultural Research Institute (IARI), New Delhi
2. Tamil Nadu Agricultural University (TNAU), Coimbatore
3. Central Institute of Agriculture Engineering (CIAE), Bhopal
4. Anbil Dharmalingam Agricultural College and Research Institute (ADAC&RI), Thiruchirapalli
5. Indian Agricultural Statistics Research Institute (IASRI), New Delhi
6. National Dairy Research Institute (NDRI), Karnal
7. Cochin University of Science and Technology (CUSAT), Kochi
8. Central Institute of Fisheries Education (CIFE), Mumbai
9. National Bureau of Fish

Genetic Resources (NBFGR), Lucknow
10. Wildlife Institute of India (WII), Dehradun

Depending on the particular field you are interested in, you can look for the institutes, colleges and universities offering the most relevant course for you.

Is Agriculture the right career choice for me?

That's the hardest question to answer for somebody else. You need to make your own choices. Still, we will discuss some of the skills and characteristics that an agriculturalist must have to be able to succeed in the field:

Love for Science and Math

If you love to study Science and do Math and interested in learning more about plants, animals and soil, Agriculture is the right degree for you. Along with farming, ranching and other agricultural practices, you will also be studying the latest technologies that will need a touch of a myriad of disciplines.

Today, the field of agriculture is developing to become a high-tech and fast-paced industry. So, along with Physics, Chemistry and Biology, having a knack to crunch numbers and some training in finance or management can set you on the path to success.

Adaptability

When you study agriculture, you need to be adaptable. Learning about soil testing in the classroom can be quite different from going to the fields and testing the soil samples for farmers who depend on your assessment to have a successful cropping season.

Moreover, you need to be able to think quickly and come up with solutions in the industry where consumer demands are constantly changing, new methods and technological innovations are getting introduced every day, and new obstacles and challenges keep cropping up.

Communication and interpersonal skills

Whether you set up your own agri-business or work for an employer, you will need good communication skills to deal directly with farmers, vendors and suppliers, and consumers.

The ability to negotiate well as well as handling formal and informal dialogues skillfully is a must in the industry where you have to deal with the government and regulatory bodies on a regular basis.

Whether it is sales, brand building and advertising, public relations or management, each aspect of running a successful agricultural business relies on effective and strategic communication.

In the end, you must be ready to understand and fulfil your responsibility towards the society and environment in general.

EMPLOYMENT ...

Continued from page 1

Well-established, financially-stable firms are seeking technologies to develop or buy Bioinformatics software to speed up the research and development.

Role of Bioinformatics in Data Dissemination

Most pharma company's information resources are currently spread out and managed by different groups. Some of these will be made more widely available on a corporate Intranet, but others will remain only on locally accessible machines. The range of interfaces will be varied, with some having their original interfaces as supplied by the vendors or authors, and others having been incorporated into an HTML page or CGI forms based interface.

Genomics occupies the largest share out of the various Bioinformatics application areas; however, proteomics take the lead. Phenomenal development in Information Technology (IT) and the internet have fuelled the growth of the Bioinformatics industry. By using computer-aided drug design, drug-designing companies can save over 30% in both the cost and time to discover a new drug. Patent protection and lack of standardization remain the biggest challenge for the Bioinformatics industry.

Key financial players in the Bioinformatics market are IBM Life Sciences, Accelrys, Affymetrix, Applied Biosystems Group, Compugen Ltd, Ciphergen Bio-systems, CuraGen Corporation, Celera Genomics Group, Incyte Corporation and Tripos Inc.

Key Industry players in the Bioinformatics -Accelrys Inc., Affymetrix Inc., Agilent Technologies, Inc., Applied Biosystems Group, Celera Genomics Group, Ciphergen Biosystems, Compugen Ltd., CuraGen Corporation, Gene Logic Inc., IBM Life Sciences, Incyte Corporation, LION bioscience AG, Silicon Graphics Inc., Tripos.

Bioinformatics Assists Drug Designing

New developments in Bioinformatics and genetics, such as pharmacogenetics (i.e., the study of the relationship between diseases, genes, proteins, and pharmaceuticals), will enable researchers to identify quickly a patient's genetic predisposition to contract certain diseases as well as their potential drug response.

Proteomics meant the isolation and identification of proteins from normal versus perturbed cells. Today, proteomics tools used to link protein expression with gene expression, structural proteomics (determining large numbers of protein 3D structures by spectroscopic or computational techniques), Protein-protein interactions and biochemical pathways studies. The main difference between the old and new paradigm is in high-throughput, parallel thinking that is now applied to huge potential of target proteins in the

development of new novel drugs. The combination of proteomics, biomarkers and metabolomics (metabolites) has generated new opportunities for the designing of more effective diagnostic tools and therapy for the diseases.

With the rising application of proteins in drug, designing is forcing the researchers to create strong new research tools and kits to rapidly screen, prepare, purify and concentrate the protein samples. The comprehensive review of opportunities in proteomics highlight a peak into encapsulated trends, search for tools to accelerate drug discovery ends with proteomics and initiative to boost proteomics research giving rise to strategic corporate activity for increasing value and rising global economy. Proteomics is an emerging science that is driving the industry from business driven economy to research driven economy.

Bioinformatics is vital for advances in the life science

The growing acceptance of bioinformatics as an important field requiring focused commercial support and activity has become a pre-requisite for firms depending on development & discovery of new drugs for patented drug solutions. The advent of bioinformatics was initiated in the industry by firms which had the foresight to establish the high core strength of this tool in gene sequencing etc where conventional methods would take year of documented research beyond the capacity purview of today's drug firms which need to identify market opportunities and respond to the same with certified clinical result with increased speed.

In recent years, innovations where IT and the life sciences converge have created vast quantities of data. The development of automated DNA sequencing and other innovative methods have reduced the costs and time needed to discover the genetic makeup of various organisms. Additionally, innovations such as high-throughput screening and micro arrays are enabling studies of gene and protein functions (i.e., genomics and proteomics). The expending complexity and diversity of information also poses new challenges. For example, data produced from studies of protein and gene function and interaction require the consolidation of information in various formats and from diverse sources. Additionally, data may not be in a standard or readily usable format, particularly if they are not available in electronic form or are text-based information from scientific literature, patents and clinical trials. Critical biological information also is found throughout various scientific disciplines, such as the chemical sciences. The ability of researchers to manage and analyze these diverse and extensive data is critical to the future success of life sciences R&D.

Bioinformatics Potential and Market Growth

Today Bioinformatics goes

deeper and deeper in R&D, IT and other allied domains as it continues to develop novel algorithms, methods, software's etc. for analysis of data. Bioinformatics has lot of potential and scope in next decade by developing critical tools for the transmission of genetic information into three-dimensional world to study the interaction of proteins with themselves or other proteins and molecules. The main challenge that lies in front of bioinformatics professionals for the next decade is to intricate the methods to achieve and sustain a competitive advantage in this space. Bioinformatics value lies in providing up-to-date analysis of the biological data and algorithms deployed to give insight into current technology market place that can be used in genomics-driven drug discovery landscape, detailing where the industry is progressing.

Bioinformatics has silently filled in the role of cost effective data analysis but next decade bioinformatics analysis will facilitate and quicken the analysis of systemic level behavior of cellular processes in order to understand the cellular processes to treat and control diseases. More recently, researchers have started using these techniques for the production of recombinant proteins.

Bioinformatics is the future of life sciences R&D as professionals will be dealing with tremendous amount of information on the biological front as bioinformatics tools would help to efficiently collect, share mine and analyze the wealth of biological and clinical data. Bioinformatics scenario for the next decade is conjectured as "Move over information age. Make room for the age of bioinformatics". Experts have already dubbed bioinformatics - a hybrid profession pairing biology and computer science for the understanding of systems biology for better therapeutics and healthcare systems.

Bioinformatics-enabled protein biomarker discovery will enable the development of safer and more effective drugs, targeted therapies and molecular diagnostics. Systems biology modeling is forecast to grow at a rate of 35% over the next five years, the highest growth of any bioinformatics sector. The potential for widespread integration throughout all stages of drug discovery will act as a catalyst for this expansion. Knowledge management is currently the leading bioinformatics markets segment.

US remains the largest market in the world, but Asia-pacific countries, particularly India and

China, are witnessing the fastest growth and are anticipated to emerge as the dominating forces in future. Bioinformatics is full of opportunities. The sector is poised to open new avenues for the other related sectors also. But the biggest opportunity area in the bioinformatics market will be in the drug discovery sector. Reduction of both the cost and time taken to discover a new drug due to fast development with bioinformatics tools and software zone is also making drug discovery an attractive field of venture in.

The bioinformatics market is stable, with many of the applications discovered being based on genomics and proteomics, which continue to boost the growth of bioinformatics tools. A greater number of R&D centers across the world are seeking a common base for the transfer of data, information and knowledge to enable an informatics-based decision support system.

Future Challenges

In future, one can see a combination of pharmaceutical and computing firms bringing together their research as well as IT capabilities. Recognizing bioinformatics as central to accelerating drug discovery, big pharma and biotech firms are expected to invest heavily in internal capabilities, or meet their needs through outsourcing. As the market matures, collaborative industry initiatives may drive even more bioinformatics demand. Innovation will depend on the integration of databases across functions and across companies.

Bioinformatics or computational biology is the use of information technology in the field of molecular biology, or the application of computer technology to the management and analysis of biological data. Here computer are used to gather, analyze and merge biological data. It is an emerging interdisciplinary research area and is increasingly being used to improve the quality of life. The ultimate goal of bioinformatics is to uncover the wealth of biological information hidden in the mass of sequence, structure, literature and other biological data and obtain a clearer insight into the fundamental biology of organisms and to use this information to enhance the standard of life for mankind.

Bioinformatics has profound impact on human health, agriculture, environment, energy and biotechnology to advance biomedical research and development. It is being used

now in the areas of molecular medicine to help produce better and more customized medicines to prevent or cure diseases, it has environmental benefits in identifying waste cleanup bacteria and in agriculture it can be used for producing high yield lows maintenance crops.

The career prospects in the field have been steadily increasing with more and more use of information technology in the field of molecular biology. Job prospects are in all sectors of biotechnology, pharmaceutical and biomedical sciences, in research institution, hospitals in industry. Some of the specific career areas that fall within the scope of bioinformatics include sequence assembly, database design and maintenance, sequence analysis, proteomics (the study of protein, particularly their structure, functions), pharmacogenomics, pharmacology, clinical pharmacologist, informatics developer, computational chemist, bio analytics and analytics etc.
